1957 INTRODUCTIONS

We have thousands of excellent daylily crosses made by Mr. Milliken before he retired and only the best of these will be introduced as they are carefully and thoroughly evaluated. We will offer only those we feel will truly be worthy of the highest awards.

We proudly offer:

SUMMER SONG (Milliken 1957) Ev. 30". Remontant. **\$20.00**

The kind of lily you would want for the centerpiece of your garden. An excellent ruffled, light yellow flower that has withstood heat, wind and rain very satisfactorily. Branching starts about half way up the sturdy upright stem. It blooms early and reblooms several times during the season. Foliage is a lush, rich green. Vigorous grower. We predict this daylily will go a long way.

GOLDEN TRIUMPH (Milliken 1957) Ev. 32". Remontant. **\$20.00**

It is a triumph, indeed, in achieving a beautiful golden lily that stands so far out in front of the field! This is a wide-petaled full open bloom of rich golden yellow. The flowers are of extra heavy substance but the strong stems hold its many blooms upright. You, too, will have a feeling of triumph when this top-notch lily is your proudest possession.

LARK ELLEN'S SISTER (Milliken) Ev. 32". Remontant. **\$5.00**

Since we have never been able to fill the demand for Lark Ellen and have accumulated considerable stock on a sister seedling, we believe it will interest the connoisseurs to know that a similar watermelon pink daylily is available. It is a somewhat lighter rose-pink with the distinguishing feature of a light mid-rib almost the full length of the petal. Blooms open wide and it reblooms several times during the season. For your benefit, we have priced this lovely lily so low because we have a good stock of it.

NOTE: We are listing Pretty Pink, a new iris by Mr. Geo. Murray—originator of Dark Chocolate, Gold Cup and other equally famous new iris. Read comments on page 17—AIS Bulletin July, 1956.

BEARDED IRIS

PRIZE WINNING QUALITY — WORLD FAMOUS VARIETIES

California grown rhizomes are superior. Any iris that is hardy anywhere is just as hardy when grown and shipped from California, but our growing conditions are superior. **You will receive better stock.** Temperatures here drop to the low 20's in the winter, and the extremely hot summers condition our plants for most every climate.

HOW TO GROW IRIS

There is no secret in growing iris—the following simple suggestions will insure success, and you will be more than repaid when the next iris-time comes around:

1. Select a sunny, well drained location.
2. Do not plant too deeply—the rhizomes should be just below the surface of the ground. Be sure the roots are firmed in the ground securely.
3. Keep well watered until the plants are established.
4. Fertilize lightly at least twice a year with a good commercial fertilizer, or well-decomposed manure, but be sure this does not come in direct contact with the rhizome—it is the roots which need the food.
5. Divide and transplant iris ever three years to insure maintaining good size flowers and abundant bloom.

HEMEROCALLIS

DAYLILIES ARE NOW MAJOR GARDEN FLOWERS

Daylilies are one of the most satisfactory perennials and grow well in almost any location. They are lovely in the border, and are particularly well adapted to naturalizing, as they do well in half-shade. Ordinary garden soil, enriched with humus and manure will produce an abundance of bloom. Varieties can be selected to stretch the blooming season from spring to early autumn. Plant the crowns one inch below the surface, with roots spread slightly downward and water in well. Hemerocallis can be left undisturbed for many years. Time of Shipment: June 15th through October.

WE ARE PROUD of the honors bestowed upon Milliken daylilies and iris. The following recent awards reflect the high esteem in which these plants are held:

SPURIA IRIS

FOR CUT FLOWERS AND GARDEN BEAUTY

The Spurias, sometimes called "Butterfly Iris," resemble the Dutch irises which are extensively used by florists, but the flowers are larger, and numerous blossoms are borne on the three- to four-foot stalks, making a very showy display in the garden, and are superb as cut flowers. They are not as fragile as bearded iris and keep for days.

Spurias require very little care, and can be left in a permanent location, so should be given room in which to grow. They thrive in full sun, or partial shade, and do best if kept well watered in the early spring and throughout the blooming season. We recommend planting in the fall, but it is possible to ship early in the spring. **KEEP VERY MOIST UNTIL ESTABLISHED.** Perfectly hardy, they are worthwhile additions to any garden. Spurias bloom at the same time as the late flowering bearded iris. Shipments made August 15 through November 15th.

LOUISIANA IRIS

The color range of this enchanting group of iris is large, ranging from the purest white through pale pinks to rose, coral tones, soft yellows, rust and copper, blues of every shade, rich old reds, to the blackest purples and wine colors. The shape and size of the flowers vary with the variety, those of the famous Abbeville type are flat and resemble a Japanese iris, while others are crisp and starched looking.

Louisiana iris are as easy to grow as bearded iris, although they prefer semi-shade, a soil enriched with plenty of humus and can take a lot of manure—in fact we have planted them using half soil and half manure, and the results have been wonderful. They are heavy feeders. Keep well watered prior to, and during the blooming season. Shipment made August 15th through October 15th.

ONCOBRED IRIS

These iris are the result of crossing the oncocyclis (natives of Asia Minor, Syria, the Caucasus, and western Persia) with some of our own bearded irises. The rare beauty of the oncocyclis has been preserved to a marked degree, and increased vigor and hardiness have been secured from these crossings. All of them will grow well in mild climates. They grow better with little water in the summer. Shipped at the same time as the bearded iris.

- AZIM** (White 1947) 1.00 ea., 3 for 2.50
An onco-bred which is very unusual in its coloring. The standards are olive-buff. Falls are somewhat deeper and more colorful, being a regular madkey of wine, purple and yellow. Exceptional for flower arrangements. 30".
- BALTIS** (White 1948) H. M. 1948 1.00 ea., 3 for 2.50
Very rich deep violet. Flowers are larger than most in this group. Useful for cutting. 36".

- JOPPA PARROT** (White 1948) 3.50 ea., 3 for 8.50
A strange medley of colors. Standards are pale violet heavily veined in purple. Falls are honey-beige, heavily streaked with almost every color in the spectrum. Streaks do not melt into a blend, but stand out in a strange manner. Luxurious brown beard and deep signal patch. Very early. 24".
- KISH** (White 1947) 60c ea., 3 for 1.50
A beautiful iris, background almost white, but so heavily veined and dotted with violet as to appear almost mauve. Deep maroon signal patch adds charm. 18"-20".
- MOZO** (White 1938) 60c ea., 3 for 1.50

- NEAR EAST** (White 1939) 75c ea., 3 for 1.50
Light yellow, marbled and overlaid with maroon dots and fine lines—reminds one of the beautiful colorings and distinctive texture of a Persian rug. VE. 24".
- NELSON OF HILLY** (White 1941) 75c ea., 3 for 1.75
A small dainty flower on 18" stems and is a gem of a cut flower. Standards are most delicately tinted with bluish lavender. Next come the warm, peach-toned styles and then the beautiful falls which start at the haft with the idea of being horizontal and then change their mind midway and turn downward showing the beautifully peppered surface of cream dotted with cinnamon and purple. E-M.
- OYEZ** (White 1938) A. M. 1941 1.00 ea., 3 for 2.00
No other onco-bred is quite so bizarre—ground color is off-white, but overall there is a magic-like veining in bold red-purple. Falls are firm and flaring. Hardy. E. 28".
- PESHAWA** (Schreiner 1937) 50c ea., 3 for 1.00

- PRESENT** (White 1941) A. M. 1949 1.00 ea., 3 for 2.50
An exquisite flower of firm substance. The background is a delicate pink tint, lightly veined and dotted with violet and accented by a velvety rose signal patch at the base of the beard. Hardy. E. 32".
